January 2009
have you noticed these behaviours in your child?

- Difficulty paying attention
- Unable to sit still
- Poor problem-solving skills/unaware of consequences of actions
- Resists change/prefers routine
- Needs reminders for basic activities at home and at school
- Difficulty learning new things/forgets skill already learned
- Problems with sleeping and/or eating
- Impulsive
- Unable to share, wait for turn, follow rules, or cooperate
- Problems bonding with caregivers
- Does not like to play alone
- Often aggressive and physical
- Poor social skills – difficulty making/keeping friends
- Overly friendly and affectionate
- More vulnerable to be victimized by strangers
- Easily frustrated/has temper tantrums/melt downs
- Hyperactive/requires constant supervision
- Difficulty understanding feelings
- Low self-esteem
- Sensitive to sights, sounds and touch
- Does not understand danger
- Over-reacts/under-reacts to pain

Some of these behaviours could be seen in children with Fetal Alcohol Spectrum Disorder.

FASD is the term now used to identify what was formerly known as:

- FAS/FAE (Fetal Alcohol Syndrome/Fetal Alcohol Effects)
- ARBD (Alcohol-Related Birth Defects)
- ARND (Alcohol-Related Neurodevelopmental Disorder)

Fetal Alcohol Spectrum Disorder is a combination of physical and mental birth defects that may develop in children whose mothers drank alcohol during pregnancy.

FASD is a problem found in all races and socio-economic groups.

Talk to your doctor about your concerns.
