

## Routine Publicly Funded Vaccine Schedule for Healthy Children

Age	Vaccine #1	Vaccine #2	Vaccine #3
2 months	Pediacel # 1	Prevnar®13 #1	Rotarix #1
4 months	Pediacel # 2	Prevnar®13 #2	Rotarix #2
6 months	Pediacel # 3		
12 months	MMR	Menjugate	Prevnar®13 #3
15 months	Varivax®III		
18 months	Pediacel #4		
4-6 years	Adacel®Polio	MMRV (Priorix-Tetra)	
Grade 7	HPV Human Papillomavirus (Health Unit school based program)	Hepatitis B (Health Unit school based program)	Menactra MenC-ACYWI35 (Health Unit school based program)
14-16 years	Adacel		

Rotarix (RV1)	Oral vaccine recommended to prevent gastroenteritis caused by a rotavirus infection in young children. Can start after 6 weeks of age and must be completed by 24 weeks of age.
Pediacel (DTaP-IPV-Hib)	Diphtheria, pertussis, polio, tetanus, Hib
MMR	Measles, mumps, rubella (German measles). First dose given on or after 1st birthday.
Priorix-Tetra (MMRV)	Measles, mumps, rubella (German measles) and varicella
Adacel®Polio (Tdap-IPV)	Diphtheria, pertussis, polio, tetanus
Adacel (Tdap)	Diphtheria, pertussis, tetanus
Menjugate (Meningococcal C)	One dose if >1 year. Children immunized in infancy (i.e. <1 year of age) require another dose at least one year after the last dose for enhanced protection.
Prevnar®13 (Pneu-C-13)	A three dose schedule for healthy (low risk) children - 2 primary doses at 2 and 4 months of age and a booster dose at 12 months. See Prevnar®13 Eligibility Schedule (tables 13&19) for high risk children.
Varivax®III (Var)	Varicella

According to the ISPA (immunization of schools pupils act) all vaccines are required with the exception of Prevnar, Rotarix, HPV and Hepatitis B.
