

What to do when you work at a highest risk setting and a household member tests positive for COVID

Jane – works at highest-risk setting and lives with her fully vaccinated 17 year old daughter, Sam.

Sam develops symptoms of COVID-19 on February 1. Sam and Jane begin self-isolation. Sam isolates away from Jane in their house (using a separate bedroom and bathroom). Sam is eligible for PCR testing because her mom works at a highest-risk setting. **Sam tests positive for COVID-19 on February 3rd.**

Sam must isolate for 5 days, until February 6th at 11:59 p.m. Jane isolates for the same amount of time as Sam.

Jane can not attend work for 10 days from her last exposure. Since Jane and Sam isolated separately, **Jane's last exposure to Sam was on February 1.** Jane can return to work after February 11th at 11:59 p.m.

***If Jane tested positive for COVID-19 in the last 90 days and the infection has resolved, she does not need to isolate and can continue to work.**
